

Smart EDMS Photo AI Platform

User Guide & System Overview

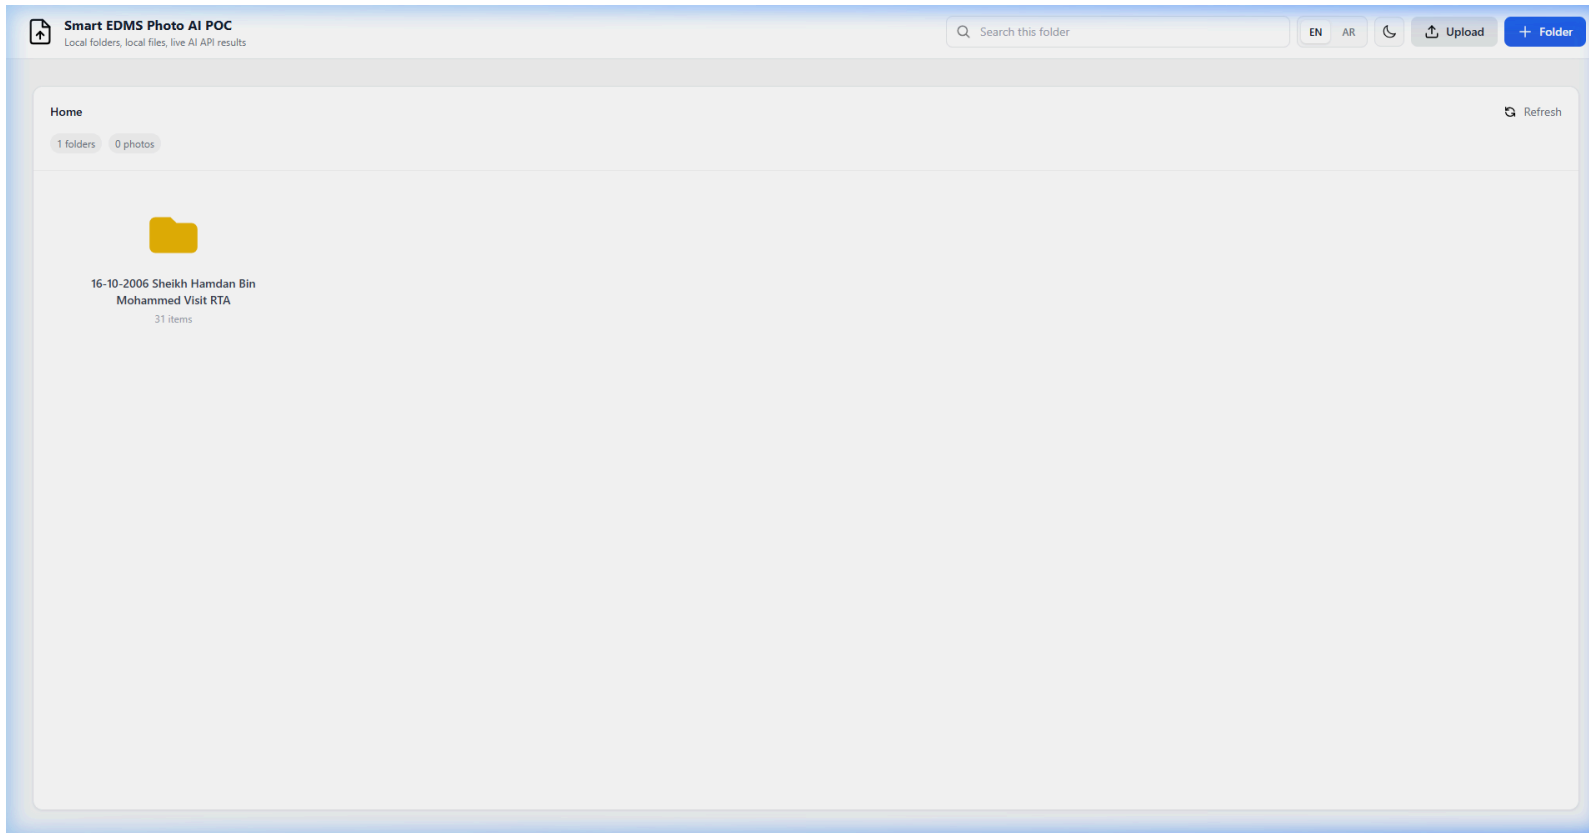

What is Smart EDMS?

Smart EDMS is an intelligent photo management system. It doesn't just store your photos; it **understands** them using advanced AI.

- **Organize:** Folders, rename, and search.
- **Analyze:** Automatically detects objects, faces, and text.
- **Recognize:** Learn and recognize people's faces across your photo library.

1. Navigating the Main Page

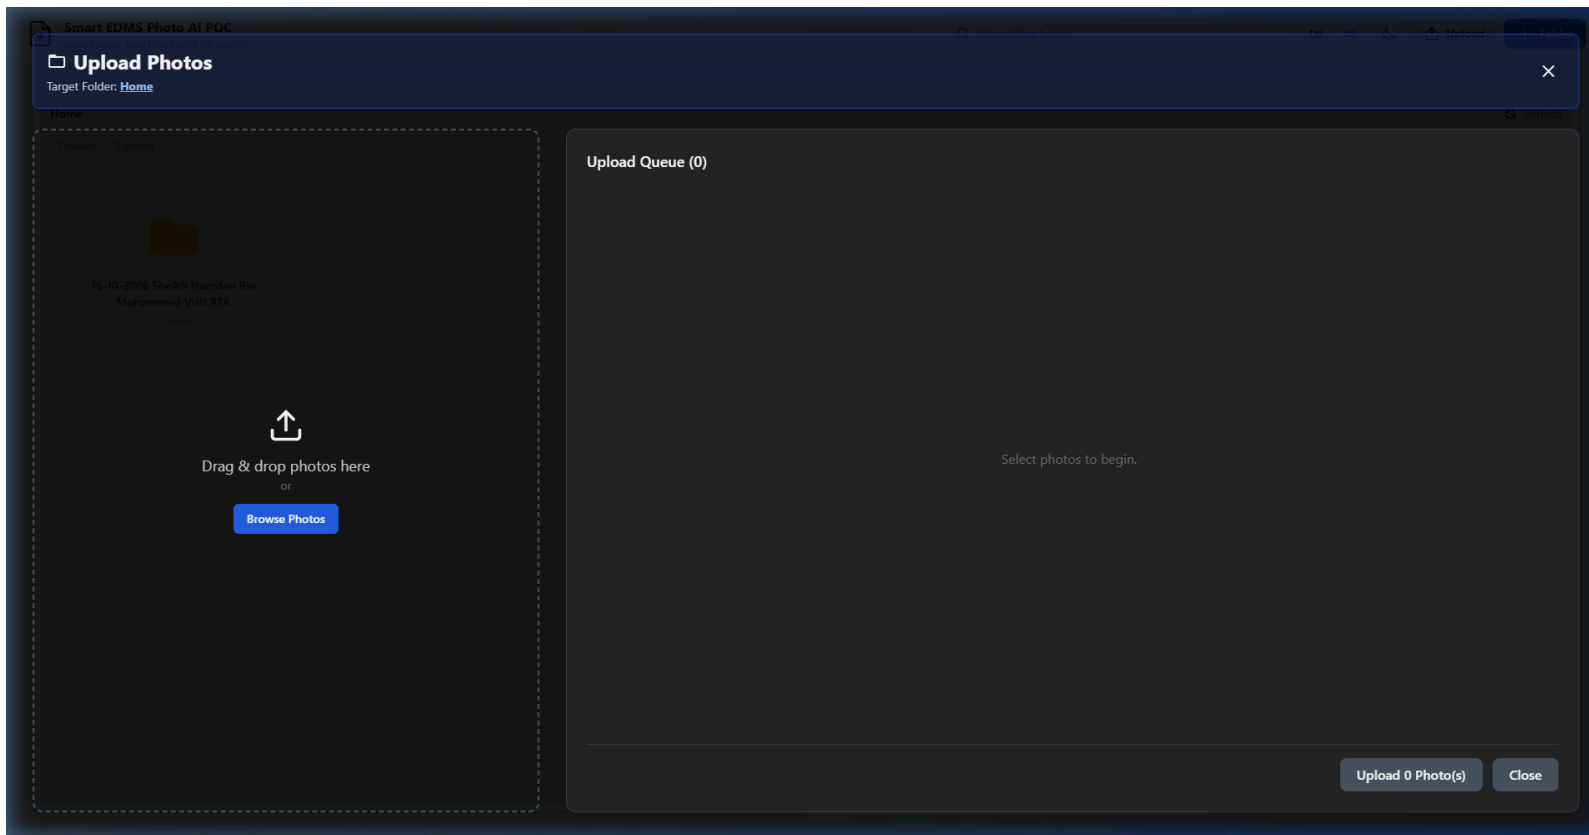

The main dashboard is where you view all your folders and photos.

- **Search Bar (Top):** Type to instantly find folders or photos.

2. Uploading Photos

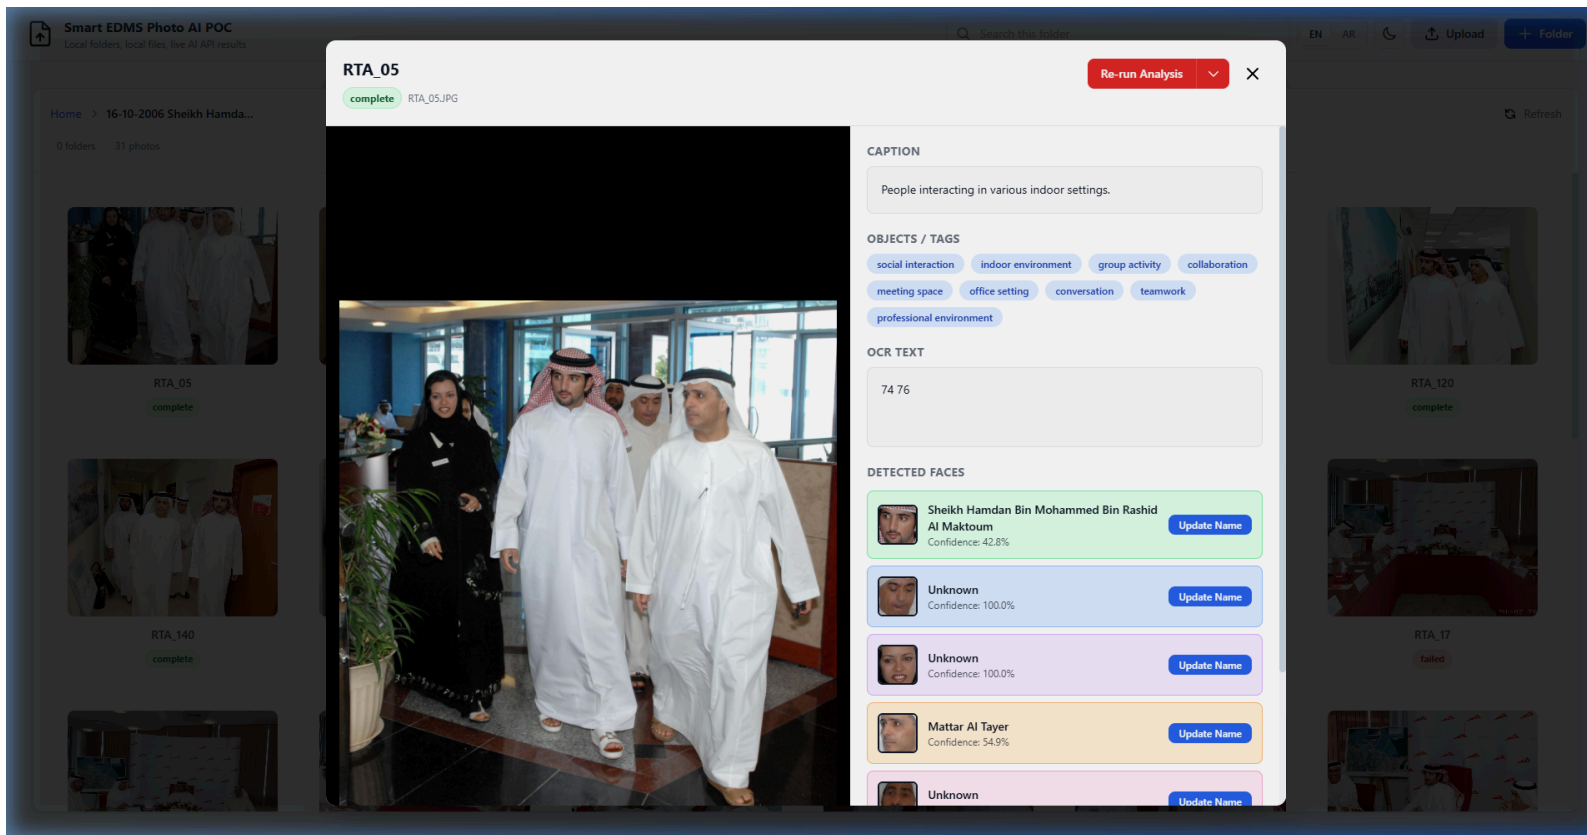

To add new photos, click the **Upload** button at the top right of the screen.

- **Drag & Drop:** Simply drag photos from your computer into the dashed area.

3. Viewing and Analyzing a Photo

Click on any photo in your folder to open the Photo Details View.

When a photo is uploaded, the AI automatically analyzes it in the background!

4. Understanding AI Analysis Results

In the Photo Details View (Right Panel), you will see the AI's findings:

1. **Caption:** A human-like description of what is happening in the photo.
2. **Objects / Tags:** Keywords of items detected (e.g., "Car", "Tree", "Building").
3. **OCR Text:** Any readable text found within the image (signs, documents, etc.).
4. **Detected Faces:** Thumbnails of all faces found in the picture.

5. Teaching the System to Recognize Faces

You can train the AI to recognize specific people!

1. In the "Detected Faces" section, find an unknown face.
2. Click the "**Name & Save**" button next to it.
3. A popup will appear. Type the person's name or select an existing one.
4. Click **Save Face**.

Next time you upload a photo with this person, the system will automatically recognize them!

Re-running Analysis

If you need the AI to take another look at a photo:

- Click the **Re-run Analysis** dropdown button at the top right of the Photo Details View.
- You can run everything, or select a specific service:
 - **OCR:** Extract text again.
 - **Face Detection:** Scan for faces again.
 - **Captions & Objects:** Regenerate descriptions and tags.

Summary

1. **Upload** photos securely.
2. Let the **AI analyze** contents automatically.
3. **Search** for text, objects, or people effortlessly.
4. **Name faces** to build your custom recognition database.
